

MAK FUOCO5 - MAK FUOCO6

the first wheel by MAK fitting both radial and Run-Flat tires

MAK launches the new wheel **MAK Fuoco**, an innovative SUV design featuring two different applications, with 5 or 6 holes. In particular, an important ground-breaking technical device marks **MAK Fuoco5**, suited for Run-Flat tires.

MAK Fuoco5 has been in fact produced with a special rim, called “**Hump EH2+**”, that makes it possible to equip the cars of those users that will choose this wheel with Run-Flat technology tyres through a peculiar rim profile and shape. Run-Flat tires let cars proceed on the way even if they have been subjected to a puncture and have an air loss. A “flat-drive” is then possible for a certain distance, sufficient to reach a safe place or a tyre dealer where you can change the tire.

The “**Hump EH2+**” profile has the **ETRTO** homologation (**ETRTO** is the European Department that rules tyres and wheels production and homologation processes) and this allows **MAK** to face a very important new market. The Run-Flat after market is profitable and very interesting in fact, since it is composed by customers and suppliers that represents prestigious car makers (for example **BMW**) on one hand, and people with an high purchasing power on the other hand.

Together with **MAK Fuoco5**, **MAK** launches a 6-spoke version of this wheel too: **MAK Fuoco6**. This one has not the **EH2+** rim and it is only suited for radial tyres. From the stylistic point of view, **MAK Fuoco5** and **MAK Fuoco6** show a strong spoke design, which is enriched by a nice colour and lights game caused by the alternation of the two colours featuring the spokes surface and the basis: the base is in fact “**Ice Titan**” grey colour, while the five sturdy spokes are diamond-finishing.

The two versions of **MAK Fuoco** seem to be then strong and very resistant: but, at the same time, their design (by **After Design** – www.afterdesign.it) is also very harmonious and well-balanced. Their sober style, together with their unique finishings, transform **MAK Fuoco5** and **6** into a perfect compromise in terms of style and aesthetics, able to equip latest generation SUVs on the market and to melt with their style consistently.

MAK Fuoco5 is available in the following size range: 8J18”, 8,5J19”, 9,5J19”, 8,5J20”, 9,5J20”, 10,5J20”, 9J22 e 10J22”. **MAK Fuoco6** is available in the sizes 7,5J17”, 8J18”, 9J20”, 9J22”.
