

# MAK MISTRAL

## the new oriented wheel by MAK

**MAK** presents **MAK Mistral**, the first oriented wheel that the company launches on the market.

The shape and the inclination of **MAK Mistral** 5 spokes show its oriented design: they have a square, straight structure and they are perpendicular to the external rim. The difference is then on the surface of the spoke, where there is a diamond insert that points the design left side. This shape game gives the wheel movement and lightness, making its style slender and slimmer. The basis of the spoke, anthracite colour, is wider, but it looks thinner thanks to the superficial diamond colour and slight design, that lighten the spoke.

**MAK Mistral** design becomes lighter and more dynamic thanks also to the connection of the spokes to the external rim: in fact the joint is thin and goes till the edge of the rim. That is why the visual perception catches longer and slenderer spokes.

Thanks to all these innovative aesthetical details **MAK Mistral** distinguishes itself among all **MAK** range designs as a unique wheel that is enriched by exclusive refinements. Its sporty look follows the current car-fashion trend and that is why it can meet the young target taste together with the car-personalisation necessities of those who want an original and nice look for their car.

**MAK Mistral** is available from March 2009 in the exclusive colour by **MAK** called **Gun Metallic Mirror**: the anthracite basis contrasts with the diamond ultra-brilliant surface of the oriented insert of the spokes and this gives birth to a nice game of colours and light and shade.

**MAK Mistral** available range includes the following sizes: 6,5J15", 7J16", 7J17", 8J17", 7,5J18", 8J18", 9J18".
