

MAK TORNADO

a new five oriented spoke design by MAK

MAK S.p.A. launches the new wheel called **MAK Tornado**.

This new design shows a brand-new style concept addressed to tuning and personalization markets: an oriented design, which gets on the same wavelength as the most recent aesthetical trends of the automotive field.

MAK Tornado 5 spokes are lightly oriented thanks to some shapes, lights and shadows games on their left side. The peculiar structure of **MAK Tornado** spokes is born from the thin and smooth groove put on the right side that causes a light-and-shade effect and makes **MAK Tornado** design original and delicate. This wheels is in fact sober and elegant thanks to the soft and round shape of the spokes and thanks to the sweet and winding shape of the groove, which is slightly curved. The Silver colour underlines the aesthetical lightness and the elegance of this wheel.

Last but not least, **MAK Tornado** 5 spokes are slimmer at their beginning, next to the fixing holes, while they enlarge a little bit next to the external rim. This longitudinal shape expansion makes the wheel design slender, lightening its look. The connection of the shape to the external rim is just on the edge, and this device extends even more **MAK Tornado** design.

All these precious aesthetical details make this wheel right to be fitted out elegant cars, for a refined and exclusive car fashion. **MAK Tornado** is addressed to saloons and medium-high power cars, of which it underlines the look thanks a soft and delicate style, which is also precious and nice, but never ostentatious.

Matrix Tornado was lunched at 2009 edition of **Autopromotec** (the most important international fair dedicated to car accessorizes and car equipments in Italy) and it is available in the following range: 7J17", 8J17", 8J18", 9J18", 8,5J19" e 9,5J19".
