

MAK CHRONO

the new wheel by MAK: so elegant and refined

MAK launches **MAK Chrono**, a new 5-spoke passenger car wheel that stands out for its very original look.

MAK Chrono 5 spokes feature a multifaceted style: they are made up of a central piece whose anthracite-colour basis clashes against the brilliant diamond-finishing of their lateral inserts. This contrast gives then birth to a particular colour&light game.

The diamond-finishing covers the external rim of the wheel too: the rim, which is turned inside out, is jutting out and this is why it is so visible, just in the foreground of the lateral view of the car.

The spokes don't lean on the external rim directly, but they connect to the interior part of the wheel thanks to a little rim, behind the surface. This aesthetical feature gives the wheel a fantastic visual depth and underlines the chromatic/light clash between the bright and the dark parts of the wheel.

The diamond inserts of the spokes join in the centre of **MAK Chrono** creating a border all around the fixing holes emphasizing their sunk position. The spokes are not perfectly smooth but, just close to the holes, they curve gently on the inside. This stylistic detail (which is also technical, since it is functional to bolts assembling) gives more depth to the wheel style enriching its look.

The style research supporting **MAK Chrono** project was very painstaking and it required hard work and many tests to **After Design** (www.afterdesign.it) designers who created it: the result is then unique and very original, allowing a peculiar and distinctive car personalization.

MAK Chrono is available in the following range: 8J17", 8J18", 8J19", 9,5J18", 9,5J19".
