

# MAK IGUAN

## 10 elegant spokes for a very original car personalization

**MAK** launches **MAK Iguan** on the international car accessories market. This wheel is a new multi-spoke design dedicated to elegant and top range saloons. **MAK Iguan**, thanks to its precious 10 spokes, was purposely designed and developed in order to embellish stylish and upper-class cars.

Its 10 spokes are coupled in order to surround the 5 fixing holes and create a very balanced and regular structure. Their surface is then smooth and even. The connection point to the external rim is soft and polished and it is positioned just at the extreme end of the wheel. This stylistic detail makes the wheel very slender and light: **MAK Iguan** dimensions seem to be then longer and its structure looks light and dynamic. The “problem” is in fact, sometimes, that 10 large spokes can “fill” too much the space between the external rim and the central part of the wheel: the result may be that the wheel design could seem heavy and, as a consequence, unpleasant. Designers who can design large spokes (necessary to support the weight of those cars **MAK Iguan** is addressed to) that appear slender at the same time grant an original and light style to the wheel, a style that personalizes a car and, above all, its lateral view, in a completely unique way.

Wheels represent one of the most visible elements of the side of a car indeed: they definitively stand out the car bodywork and that’s why, if you fit your car with beautiful and precious wheels, they will embellish its look for sure.

The 5-hole connection of **MAK Iguan** makes it a wide-market wheel that can be fitted on a very large range of cars. The available starting range includes the following size: 8J18”.
